1. A request for continued examination (RCE) under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on July 30, 2004 and October 1, 2004 have been entered.

2. Claims 1-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on September 2, 2003.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 17-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Narumi et al. (U.S. Pat. No. 6,031,800).

Narumi discloses a known optical disk substrate (see fig. 27). The disk comprises a glass layer (2301) and an address information pattern formed on the surface of the glass layer (cl. 1, ll. 16-19). The information pattern is formed having concave and convex shapes (see fig. 27).

Claims 17-19 recite many limitations directed at how the claimed substrate is produced using a carbon mold. The determination of patentability of a claimed product is determined by the product itself. The patentability of a product does not depend on its method of production. In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985); In re Brown, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); In re Pilkington, 411 F.2d 1345, 1348, 162 USPQ 145, 147 (CCPA 1969); MPEP § 2113; see also In re Marosi, 710 F.2d 798, 802, 218 USPQ 289, 292-93 (Fed. Cir. 1983) (holding once the examiner provides a rationale tending to show the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and a prior art product). In the instant case, Narumi discloses, regardless of its method of production, a substrate with all of features of the claimed

product substrate. Narumi therefore anticipates the claimed substrate regardless of the recited process of manufacture.

5. Applicant's arguments with respect to claims 17-19 in view of the previous rejection are moot in view of the new grounds of rejection described above. It is noted however, that Applicant's arguments with respect to the previous rejection seem to focus a difference between how the prior art substrate and how the claimed substrate is made. It is emphasized, as set forth above, that the patentability of a claimed product (in this case, a substrate) is determined by the product itself, not its method of production. Thus, as set forth above, the Narumi reference anticipates the claimed substrate product regardless of the recited use of a carbon mold for producing the claimed substrate product.
